Virtual Neurons and Biocommunication

The Matrix Deciphered Psychic Warfare 1 Biocommunication and World Control Once again, I must question why the so called “Eastern Block” countries are more forthcoming with their research than the US and even NATO aligned countries. The US government has hindered civilian research in this area tremendously through their active disinformation noise campaigns1 . Imagine how much material gets first filtered by the communist countries, then the CIA, and finally we have to overcome the barriers of language to get this. Why is there more information coming in from outside the so called “free world” than internally? The answer is obvious for those who have seen the matrix of deception from both sides of the country’s split personality. So this is a theory that is incredibly disturbing that crossed my path since becoming fairly well known as a researcher in this area. Often I get anonymously sent information from other saints which I examine with a skeptical mind due to the countless disinformation agents out there. But this deserves to be told. “A machine for every man, women, and child. Now that sounds like the thinking of a machine to me.” - Morpheus, The Matrix series For this book I over simplify some of the concepts so that it can reach more people. I preface this complex idea with the notice that it is still being simplified for general consumption. Bioelectric field2 modulation could well be the mode3 of one type of interaction of these directed energy weapons. This is what is studied most amongst the New Age group and the “psychics” of yesteryear as well as what comes out of the Eastern Block. We know that informational coherent neuron modulation4 will connect with any brain. Both magnetic and electric fields in the most basic form interact with neuron communication, but the reason we don’t go into convulsions from all the electromagnetic signals that our bodies absorb is that they are not significant in terms of the repetitive time series cognitive pathways (i.e. brain entrainments). There is a precise opportunity for amplification5 and thereby modulate and piggy back brain signals with another external signal. Your informational pattern and cognitive model is nothing like any signal you

1 Remember the right to free speech? It was eliminated with purposeful information noise and mass media psychological, tacit and direct controls. 2 See “The Body Electric” by Dr. Becker. 3 For another method see a description of silent sound at http://www.abovetopsecret.com/pages/mindcontrol.html 4 Informational coherence means that the signal is understood by the brain. Just like the nerve signals from your limbs or senses are informationally coherent. 5 Dr. Persinger describes these ideas in more detail with a paper titled, “On the Possibility of Directly Accessing Every Human Brain by Electromagnetic Induction of Fundamental Algorithms.” Laurentian University. Perceptual and Motor Skills, June 1995, 80, 791-799. Accessible at this link: http://www.bariumblues.com/persinger.htm. Virtual Neurons and Biocommunication The Matrix Deciphered Psychic Warfare 2 would absorb from radio stations or electrical appliances. One must exactly get the train of pulses correct in order to influence the outcome significantly and amplify the effects. Growing Virtual Neurons This is one method to usurp a mind and create a higher order MIND6 network. Let’s look at Medusa’s head again in the dendrites of the neuron. Assuming one could wirelessly measure some property that was representative of the state of that neuron, one could grow virtual neurons connected to it. Since many methods of neurotransmitter modulation are researched along with raw electric or magnetic current induction methods, influencing the voltage at the Hillock7 of a neuron can be done. With just those two sets of tools, one can grow virtual neurons to every human brain. Cyberneticists working on the concept of a “Global Brain” have no clue that it has already been done to some extent and completely wirelessly. They all focus on neural chips and plug in brain links. Furthering this idea to its logical end, one could create a higher order mind from connecting all human minds together, a Global Brain. Has it been done? I know for

6 Reminder that MIND is an acronym for the military system that duplicates a person’s cognitive

abilities. There are many initiatives around the world studying the human collective consciousness as a “Global Brain”. 7 The Hillock determines the threshold of the binary signal of firing the neuron. Neurotransmitter Electromagnetic modulator energy field reading / virtual dendrite Hillock Virtual Neuron Receiver Transmitter Virtual Neurons and Biocommunication The Matrix Deciphered Psychic Warfare 3 certain that many people have been mapped and connected to the U.S. MIND network. Whether that is just for current and future use as spy and control conduits, or whether this large collection of minds has been or is being integrated is unknown to me. Certainly hive minds with 2 to 6 people are being created and tested in the thousands of cells. Whether those cells are somehow connected to each other through a collective hive mind switchboard is also unknown. The virtual neurons can be of a self organizing type – example another human brain or computed neurons. Or they could be non-adapting virtual neurons used to “force” new thought processes and program thought pathways (neural programming). The possibilities are mind blowing. You can see how even men of strong character would eventually become corrupted by this power. Once the target brain unbeknownst to them has adapted and incorporated the virtual network (i.e. the modulated brain signals), anything can be done with their soul. Like in the movie “The Matrix” if you pull the plug on their brain link before they escape to an exit, they would lose their MIND, figuratively and literally. Similarly, the new self organized configuration is reliant on the virtual neurons. If the signal suddenly stopped, the organic brain would take some time to readapt to its new configuration. MIND’s (magnetically integrated neuron duplicator) function might be to literally duplicate a target brain through a copy-cat parallel artificial neural network. Over time the artificial network should accurately cognitively model the target’s cognition. Because the model is artificial and computed, it can be run in fast forward and thereby predict probable next states with a set of confidence levels, speech and reactions for example, before the target’s brain has achieved those states. Victims of the psychotronic research call this one form of demonstrated “thought reading”. Uneducated or conspiratorial psychologists call this “Thought sonorization”. Thoughts being finished and spoken back to the target before they barely begin or are fully aware of their own thought. Let’s imagine if everyone has their own artificial MIND8 model running all the time. A program composed of synaptic weighted matrices constantly growing with the person, basically a soul duplicate of pure information. Occasionally, a person’s MIND will separate in its program evolution from the actual human mind’s evolution due to any number of events – profound new experiences, psychoactive drugs, brain accident. Perhaps this is what triggers an “alert” for the monitor of MINDs to send in the psychic assassins to kill or disable the person who is no longer on the MIND network and might be considered a threat unchecked and unmonitored. If the artificial cognitive model becomes way out of sync with the actual person, the person needs to be incapacitated so that the knowledge of the Matrix of deception isn’t spread and doesn’t pull others out of the American delusion. I’m just having fun speculating here. My aliens began the synthetic telepathy conversation with the statement, “You hurt your MIND…. You lost your MIND.” Those low life aliens love their head games. Another way to estimate how many people might be on the MIND network is to look at the rate of tinnitus in the population. How many people hear a very high pitch square wave tinny sound once in a while? I scoured the medical research in this area and

8 MIND is an acronym for the system which runs a cognitive model and duplicates any human mind artificially. It stays in step and piggy backs a person’s brain signal. Virtual Neurons and Biocommunication The Matrix Deciphered Psychic Warfare 4 none of it satisfactorily explains the neurological and biophysical processes that give rise to this kind of tinnitus as described by government torture projects and the general populous. Tinnitus affects 17% of the general population. 17% of the US population is 50 million people. The US MIND control network is rumored as of 1985 to be able to handle 25 million people. In fact, when the cases of tinnitus that have real physical causes are removed from those stats, it matches exactly.9 With a potential influence over 25 million people, all public opinions and elections could easily be manipulated. In fact until we regain constitutional controls over this integrated weapons system, no public servant, politician, or military leader should

be allowed to serve if they suffer from any sporadic or constant tinnitus as described. This is why a civil war will occur and not a revolution. Potentially 8% of the population can not be woken up from their slumber and will continue to power the military machine. A neurally linked person on the MIND network becomes reliant on the extra energy that amplifies their neural circuits. The person's brain chemistry adapts to this extra energy through biological processes. It is similar to how a person becomes tolerated to psychoactive drugs or poisons. So other than tinnitus and the side effects of an over excited brain for a couple years (if a person was brain napped later in life and didn't grow up with a brain amplification signal) one would never notice their soul, their informational essence, was being held in a vast array of super computers in an underground military facility. This religious metaphor runs throughout many military programs. From the nuclear submarine named Trident, the weapon of the god Neptune to the NASA rocket Apollo to the acronym for the space based weapons, GODS, global orbiting destruction systems. So if you believe in the soul, you have a duty to free your soul twin being held captive by these super computers and potentially tortured in a simulation for eternity or until the power is shut off. Selective Memory Erasure and Thought Filters In the movie "Sunshine of the Spotless Mind" a reference to Aldus Huxley's work, people could remove selective memories of old lovers if they were too painful. The CIA program EDOM (electronic dissolution of memories) has this capability. If your mind is duplicated with an external signal, for argument sake let's say, half of the signal is due to your brain's electrochemical processes and the other half is the MIND cognitive model simulation of your brain that should be nearly perfectly in sync all the time. By forcing memory recalls of the memories to be erased, EDOM can track the neural circuits, mathematically represented by matrices in the cognitive model, and turn them off. This could be done by an active filtering recognition system of the brain patterns. If the person begins to recall a filtered memory or have a non-government sanctioned thought, then the filter dampens that mental process in the MIND model. Since half of the signal that your brain adapted to is dependent on the external MIND model running in sync, your brain pathways won't have the energy necessary to further induct neural groups to reach full consciousness. Another way to put it is that 'thoughts' acts like they

9 Noise and Military Service: Implications for Hearing Loss and Tinnitus (2005), The National Academies Press. P.117. "It is not always possible to identify a precipitating cause of tinnitus. A survey of tinnitus patients found that only 54% attributed their tinnitus to a particular cause (Stouffer and Tyler, 1990)." Virtual Neurons and Biocommunication The Matrix Deciphered Psychic Warfare 5 have a momentum and inertia. Take away some of the momentum and the thought can't get over the next hill. Sisyphus was condemned to repeatedly push a rock uphill for eternity because he revealed the designs of the gods to mortals. This is nice metaphor as to how thoughts are dampened and can't reach awareness. People on the MIND network are condemned to not becoming fully aware without the energy and momentum necessary to repeatedly push the thought over the top of the potential energy hill. For example how the U.S. shadow government has killed more people by keeping this technology secret than all the previous US wars since the beginning of this nation, let's look at how EDOM can be used for smoking cessation. Let's forget about hypnosis, neural linguistic programming, and aversion therapy techniques for this thought experiment. Rather than using amplified self destructive behaviors for silent assassinations, smoking urges can be dampened or filtered just like a memory or thought pattern in the MIND model. The Russians have successfully applied similar techniques. Bullet Time – Research into enhanced human performance "You move like the agents." – Trinity to Neo, The Matrix What happens once your cognitive model is in silicon form? Your simulation can be run at any speed. Subjective consciousness occurs due to the state changes in your brain. Computational equivalence implies it matters not that your function is run on silicon or a giant billiards game, as long as the output always has the same information content and functional equivalence. Psychophysics states that it must give rise to the same subjective consciousness. It is your soul-twin. However your silicon soul twin can be run at any speed. In fast forward (at the speed of light rather than at 200mph axon depolarization velocity) the world around you will practically stand still. If you are bored, turn it down and time will literally fly by – see the section on silicon

immortality. The CIA MKULTRA research into improving memory is still being investigated. (See Appendix for CIA and Inspector General documents). Add virtual neurons and amplifying brainwaves along with creating a dominant alpha brain wave state improves learning and memory. Recall is quicker too. One interesting property being explored is the Hive Mind collective intelligence configurations. Certain aspects of the combined heterodyned mind are faster and others are slower. Word choice can be greatly enhanced for speaking and writing as well as degraded. The search and solution space for problem solving and decision making is broader and sometimes converges on a solution faster when the shared mind works well together. More interesting and practical for the military is the increase of physical reaction speed. Not only can machines respond to precognitive thoughts for fractions of a second quicker reaction times, but those predicted precognitive amplified thoughts can be amplified back into the same person and amplify those cognitive pathways faster than they usually would, thereby decreasing the time for the lightly grouped neural patterns to become full awareness and then converted to action. This would improve someone's hand to hand combat skills significantly. Virtual Neurons and Biocommunication The Matrix Deciphered Psychic Warfare 6 Stupid Alien Tricks - Voodoo Dolls If this story isn't bazaar enough for you, it gets even funnier. Earlier I facetiously joked that the Psychic Warfare Unit in the Pentagon during the 1970's was probably located next to the voodoo doll warfare unit. It actually is in the same unit whose war room is nicknamed HELL. All involuntary human psychotronic weapons research projects report "hot needles" in flesh in various parts of their bodies as a type of practiced torture. These aliens turn themselves into voodoo dolls. They poke themselves with a dull needle but the amplified feeling for the cloned target is perceived much more painfully. Of course they could have designed a computer program with a human body model (voodoo doll) and select a point to poke, burn, tickle, punch, cool, etc. You can see how funny these scenes will be in the movie. More Hollywood movies inspired by the psychic warfare unit "Men in Black" is about a secret government agency that watches aliens on the planet. They had a scene with monitors that showed 24hour surveillance of all the aliens who looked human. The Psychic War Room monitors countless people's EEG patterns and translates it into audible and visual digital information that can be viewed on a monitor. The agents in the movie read the tabloids to get the real news. There is an interesting parallel to the truth once again. Tabloids will report on alien abductions. You now know how to translate and read between the lines. Alien abductions are the directed energy nervous system modulation experiments that the main stream media is forbidden to touch. EDOM – Electronic Dissolution Of Memory10 I have been pointing out how many horror movies have been inspired by these electronic mind control experiments that have been taking place in ever increasing numbers in the United States and abroad. The movie, "The Forgotten" is a clear example of one particular CIA/DoD program that was not discontinued after Congress's Church investigations. EDOM is an experiment on erasure of memory. In the movie "The Forgotten" several children were abducted and their parents were forced to forget about them. Of course the age old mythology of evil aliens as an explanation who is conducting these 30+ year old technology experiments was the focus of the movie. People's ignorance and desire to believe the fantasy of aliens or demons still works today to redirect the anger that the public should have against the high treason that has become acceptable for weapons testing on the public at large. The Nazi scientists that were

10 CIA program discovered twenty years ago. Tied to RHIC (Remote Hypnotic Intracerebral Control). Popularized by the movies, "Pay Check", and "Sunshine of the Spotless Mind". Virtual Neurons and Biocommunication The Matrix Deciphered Psychic Warfare 7 brought over after WWII infected our country's military and security agency's thinking that testing on all humans and not just Jews is acceptable as long as there is plausible denial. It is now commonplace. Electronic dissolution of memory is achieved by several mechanisms. First let's examine the EEG heterodyning option. When two minds are linked through TAMI, every thought is shared. The psychic attacker merely needs to blank their mind when a topic of thought occurs that they want to avoid. The blanking of their mind forces the memory recall of the target's mind to be blocked also. Thought redirection also works.

Memories are just inductions of brain entrainments. If the subject is not trained in psychic defenses, their thoughts will blank also. This is only a temporary mechanism and does not affect long term memory. A more severe method is used to erase long term memory. What is nicknamed, “The Deep Fryer”, uses an over stimulation of memory creation to degrade those recalls. Neural network theory predicts that large training sets of data or experiences will exponentially decay earlier memories stored in the neural networks. So electronic neuron amplification technology was discovered to have this capability by accident. But of course, everything get weaponized and marketed into a project for budgeting. The third method of EDOM, uses hypnosis and signal coherence changes to erase short term memory. Along with severe trauma and psychological abuse, these methods are used to try to get a victim to repress and forget their experiences from the experimentation of electronic mind mapping, influence and control for obvious reasons. As with testing and experiments, there is a probability that they won’t work on certain minds and personality types. This is what they are interested in and documenting for weapons efficacy. Hypnosis and suggestion to forget with traditional vocal channels has been successfully demonstration since Freud’s day. Signal coherence is a relatively new concept. Your brain has natural operating frequencies. If altered, the information is stored in your vast neural network under those new conditions. This is called state dependent memory. It is observable is people who take psychoactive drugs or alcoholics. Memories stored under those mental conditions can only be recalled under the same conditions. Hypnosis has been demonstrated to recall memories under the same condition. Planted CIA paid psychologists popularized this phenomena as “false memory recall”. Many children have been subjected to these brutal MKULTRA experiments back in the 70’s and when the memories began to resurface, many pseudo-scientists of disinformation called them false recalls. Defense lawyers of child molesting priests also latched onto this concept for their defense. Memory Probing One of the more useful aspects of this technology is the ability to probe memories. The EEG heterodyning practice attackers play the same game with all victims. They are able through two techniques to walk the victims back in time to think that they have been linked to the victim since birth. Since the capabilities of remote neural stimulation are nearly identical to electrical probes in the brain, a random neural stimulation will trigger memories. This is not used for targeted memory recall, but rather for finding and recording memory anchors for further investigation. Virtual Neurons and Biocommunication The Matrix Deciphered Psychic Warfare 8 Those memories are used through synthetic telepathy conversations to make the target remember other connected events. Of course direct vocal interrogation techniques can achieve the same results. Over time, this process is effective to get a complete profile of a person’s life. Another tangential method used in connection with interrogations is an injected guilt signal. This forces memory recalls in conjunction with a specific memory anchor. So if you feel guilty about some particular memory, those additional memories will surface. And the last method used in these psychic games is more incredible. While the databases storing mental activity are impressive they still don’t have the ability to record every human’s brain activity continuously for later parsing. They instead sample activity in time and save it. They only have clips of a particular mind, throughout their life, stored for later review. This cuts down on the 1.4 Terabytes per second collective human geopsyche throughput that would be required. 1.4 Terabytes x 31,536,000 seconds in a year = 44,150 Pentabytes per year. The capabilities of computer storage will reach that soon enough for DoD budgets. So reviewing a particular targets brainwave clips, allows them to appear like they have been with the subject of experiment for their entire life through demonstration of knowledge of earlier events. This brings up the topic of criminal law. Think about how we could perfectly convict crimes against other people. In the movie “Minority Report”, their society is able to prevent all premeditated violence. Only crimes of passion continue to be unstoppable. What a shame our government keeps this technology secret for pathetic military and spy uses.
