(no moby - just V2K synthetic thelepathy and 100 % security of communication..) ELECTROMAGNETIC RADIATION Electromagnetic radiation (often abbreviated E-M radiation or EMR) is a form of energy exhibiting wave-like behavior as it travels through space. EMR has both electric and magnetic field components, which oscillate in phase perpendicular to each other and perpendicular to the direction of energy propagation. Electromagnetic radiation is classified according to the frequency of its wave. The electromagnetic spectrum, in order of increasing frequency and decreasing wavelength, consists of radio waves, microwaves, infrared radiation, visible light, ultraviolet radiation, X-rays and gamma rays. The eyes of various organisms sense a small and somewhat variable window of frequencies called the visible spectrum. The photon is the quantum of the electromagnetic interaction and the basic "unit" of light and all other forms of electromagnetic radiation and is also the force carrier for the electromagnetic force. Electromagnetic radiation carries energy and momentum that may be imparted to matter with which it interacts. 162 Electric beam in a vacuum In a vacuum (e.g. in space), an electric discharge can travel a potentially unlimited distance at a velocity slightly slower than the speed of light. This is because there is no significant electric resistance to the flow of electric current in a vacuum. This would make such devices useful to destroy the electrical and electronic parts of satellites and spacecraft. However, in a vacuum the electric current cannot ride a laser beam, and some other means must be used to keep the electron beam on track and to prevent it from dispersing: see particle beam. Particle beam Though particle beams are perhaps most famously employed as weapon systems in science fiction, the U.S. Defense Advanced Research Projects Agency - DARPA started work on particle beam weapons as early as 1958, two years before the first scientific demonstration of lasers. The general idea of particle-beam weaponry is to hit a target object with a stream of accelerated particles moving at near the speed of light and therefore carrying tremendous kinetic energy; the particles transfer their kinetic energy to the atoms in the molecules of the target upon striking, much as a cue ball transfers its energy to the racked balls in billiards, thus 163 exciting the target's atoms and superheating the target object in a short time, leading to explosion either of the surface layer or the interior of the target. Currently, the materials for such weapons are "high-risk" and may not be developed for some time. The Defense Advanced Research Projects Agency (DARPA) is an agency of the United States Department of Defense responsible for the development of new technology for use by the military. DARPA has been responsible for funding the development of many technologies which have had a major effect on the world, including computer networking, as

well as NLS, which was both the first hypertext system, and an important precursor to the contemporary ubiquitous graphical user interface. Deuterium fluoride lasers have found military applications: - MIRACL laser - Pulsed Energy Projectile - Tactical High Energy Lasers Electromagnetics . Brain waves showing levels of sleep or relaxation 1. BIO-ELECTROMAGNETICS Electromagnetic, Very low Frequency Electromagnetic radiation - Sleep attacks, sleepiness Electromagnetic, Active Denial System - millimeter waves, supercharged versions of microwaves, to heat up the skins nerve endings 164 2. ELECTROMAGNETICS Electromagnetic, High Power Microwave - HPM Weapons - Energy generated by a conventional electromagnetic apparatus, such as a radar transmitter, or released from a conventional explosion converted into a radio-frequency weapon which causes the disruption of electronic systems. Usually an ultra- wide band source focus due to target vulnerability considerations. HPMs can also cause human unconsciousness without permanent maiming by upsetting the neural pathways in the brain and/or death [256,278]. Electromagnetic, Thermal Gun - A device that directs energy to produce heat, in concept similar to a microwave oven [565]. Electromagnetic, Radio Frequency - RF Weapons - A class of weapons which transmit short, high-powered pulses of electromagnetic radiation over significant ranges [278]. Electromagnetic, Engine Kill4 - The use of high-powered microwaves to kill the electrical system of an engine. Electromagnetic, Maser - Microwave Amplification by Stimulated Emission of Radiation. A microwave generation device. Electromagnetic, Interference (EMI) - Flight control systems of military aircraft are sensitive to electromagnetic interference (EMI). It is suspected that several crashes of Army UH-60 Black Hawk helicopters may have resulted when they flew too near large microwave transmitters [278]. Defence R&D Canada Technical Memorandum DRDC TM 2004-006, December 2004 1. Radio Frequency Weapons and Directed Energy Weapons (Annex D) High Power Microwave Weapons (HPMWs) form a sub-set of directed energy weapons and are used to damage or destroy enemy equipment, facilities (and possibly personnel), by irradiating them with electromagnetic waves of high intensity, from a distant or standoff location. Primarily, HPMWs are intended to cause a function "kill" of the target attacked by disturbing, upsetting or damaging the target's electronics by HPM irradiation, and are thus most useful in disabling rather than destroying "intelligent systems". In such applications, lower energies are needed to disable, rather than destroy equipment (such as missiles, vehicles or communications facilities). Since microwaves are part of the electromagnetic spectrum, they travel at the speed of light, a speed that is many orders of magnitude greater than the fastest shell or missile. This fact makes HPMWs operationally useful since it provides exceptionally short reaction times in self-defence situations, for example, against incoming cruise missiles once the latter have been detected by radar or by other means. Adding a capability such as electronic beam steering by means of phased- array antennas, a HPMW could defend against a concerted attack by many missiles approaching from a given direction or sector. Numerous self- protection and attack scenarios exist in the defence context, and offer a sense of the possibilities, advantages and limitations of HPMWs in typical 165 situations, as opposed to predicting the characteristics and capabilities of future weapon systems. Scenarios of self- protection include: large ships against incoming cruise missiles; large aircraft against surface- to-air and anti-aircraft missiles; fighter aircraft against attacking missiles; and military units against attacks by 'intelligent' ammunition. In the same way, attack scenarios include: suppression of enemy air defence and C3I facilities; disablement of enemy low-earth orbit satellites and other high-value targets; dispersion of crowds, rioters and in counter-terrorist situations using non-lethal HPMWs; and disablement of an enemy's domestic critical infrastructure, transportation and communications systems and its civilian defences. While countries such as the US, France, UK and Russia are the main players in the field of HPMWs, DRDC is Canada's only player in this field and the current level of effort is minimal, because of the anticipated high development costs. Sharing of HPM technology between minor players, such as Canada, and the major international players is also minimal. Yet the interest for HPMWs from CF clients is growing, as the number and diversity of potential applications (for both self-protection and attack purposes) increases. The potential R&D opportunities identified by the author are: (1) exchange information among the CF services (land, maritime, air) and coordinate all CF requirements with the DRDC R&D programs' ability to meet those

requirements; (2) develop a coordinated strategic direction and research areas in which DRDC can play a role; (3) secure DRDC funds and other resources to upgrade the existing facilities to a position where they can play a significant role in exploiting HPM technology for CF purposes.

2. Acoustic Weapons (Annex E)

Acoustic weapons are devices that are used to aim mechanical energy at a target using sound waves and air pressure as carriers. While the use of sound as a weapon of psychological warfare in historical battles has been written about since antiquity, verification is impossible. More recently, sound in the audible range has been used in psychological warfare operations creating a variety of effects, depending on the frequency/wavelength and intensity of the sound: hearing interference, performance degradation, pain, temporary hearing loss and tissue damage. In crowd control operations, sound "blasters" have been used to deter or repel people, and are commercially available to police and military forces. Although generally unverifiable and irreproducible, claims abound about the incapacitating nature of "infrasound", the inaudible region below the audible. "Infrasound" or low frequency acoustic oscillations can theoretically be used to induce resonant vibrations, matched to the resonant or natural frequency of the target body's organs or cavities. Weaponizing such devices is difficult because infrasound is dispersive, non-directional, limited in range, and dependent on a large number of characteristics of the target (mass, size, mechanical properties of internal organs, age, gender, and degree of fitness). Physically massive and bulky, "infrasound" weapons (given their current state of technological development) would likely be uncontrollable and unpredictable, possibly causing as much disruption to one's own forces as to the enemies'. Sound intensity (persistent for about ten seconds), meanwhile, has more demonstrable physiological effects in humans, from irritation (at the modest 166 power levels), to sickness/headaches, to loss of bodily functions, and finally to total incapacitation (at the very highest power levels). "Ultrasound", in the frequency range higher than the audible, can be formed into beams, and at low power is used in a variety of procedures: non-destructive evaluation of materials and non-invasive medical/dental investigations and therapies. At high power needed for weaponization, propagation becomes non-linear, and is highly dependent on atmospheric conditions, limiting the effective range and the ability to control the effective power level at the target. Although claims have been made about the psychological and skin surface physiological effects of "ultrasound" weapons, it is generally believed, in the scientific community, that such weapons do not affect the target's psychological behaviour beyond the physiological, aural discomfort. Early R&D indicates that Vortex ring generators may be able to deliver low frequency periodic shock waves, which combined with high noise levels, could be used as a crowd control device. Single burst vortex ring are able to knock targets off balance at short ranges, without doing any long-term harm. Vortex rings could also transport irritants (gas or particulates) to enhance crowd control. The opportunities for weaponization of acoustic devices (for defence applications) seem limited at present, and despite some claims in the literature the technology does not seem to have passed the level of annoying/repelling people through the use of mere sound intensity. Many countries have reduced the amount of their R&D effort in this direction.

3. Laser interaction with the human body

The organ most vulnerable to laser radiation is the eye. Depending on the wavelength of operation of the laser (Fig. 3), the character and degree of damage can vary substantially. If it is in-band (Fig. 4), adverse laser effects are generally believed to be limited to the retina. Thus in the visible and near infrared (400 to 1400 nm), the magnification of the eye lens comes into play and the laser beam is focused onto a very small spot on the retina. The magnification effect can reach 100,000 times, so a few $\mu\text{J}/\text{cm}^2$ are sufficient to damage the retina. The effect upon the retina of in-band lasers may vary between a temporary reaction without residual pathological change and permanent blindness. As the retinal irradiance is increased, they may cause lesions whose progress in severity up to vitreal haemorrhages of the retina with leakage of blood into the inner eyeball where the damage is permanent. A laser operating out of band to the eye requires a higher level of density to cause irreversible damage. For instance, near-ultraviolet radiation will penetrate only as far as the lens, whereas IR radiation (10.6 μm for example) will be absorbed in the cornea. In this case, the damage threshold is more than 2000 times higher than that for the in-band laser. However, cornea burns are extremely painful and would

result in immediate incapacitation of the person involved. The organ most vulnerable to laser radiation is the eye. Depending on the wavelength of operation of the laser (Fig. 3), the character and degree of damage can vary substantially. If it is in-band (Fig. 4), adverse laser effects are generally believed to be limited to the retina. In this case, the damage threshold is more than 2000 times higher than that for the in-band laser. However, cornea burns are extremely painful and would result in immediate incapacitation of the person involved.

Description of the Technology RF (radio frequency) weapons consist of non-nuclear electromagnetic pulse (NNEMP) and high-power microwave (HPM) weapons, whose energy is characterized by the long wavelength (low frequency) portion (radio waves and microwaves) of the electromagnetic spectrum. A directed energy weapon (DEW) constitutes a system using directed energy primarily as a direct means to damage or destroy enemy equipment, facilities, and personnel. High Power Microwave Weapons High Power Microwave Weapons (HPMWs) are directed energy weapons, which are designed to attack a target by irradiating it with electromagnetic waves of high intensity over a certain distance. As indicated by their name, HPMWs use the microwave section of the electromagnetic spectrum, which we define to cover the frequency span from 300 MHz to 300 GHz, corresponding to wavelengths from 1 m to 1 mm. The label "high power" means that the microwave source in question is able to generate a peak power of more than 100 MW or an average power of more than 50 kW (where average power means the power averaged over one second). The intended effect of an HPMW is to cause a function kill of the target attacked by disturbing, upsetting or damaging the target's electronics by HPM irradiation. This corresponds to the idea that HPMWs are primarily useful against "intelligent systems" and do not waste energy on mechanical destruction. International The U.S., France, U. K. and Russia are the main players in this technology. Russia advertises sources that can be bought off the shelf. From the U.S. also, it is easy to buy sources with peak power ranging into 100's of Megawatts. The information on whether any of these nations are deploying these sources as weapons for any of the scenarios mentioned above is classified and is not shared. One exception is the Non-Lethal HPMW against hostile crowds. This is advertised in the U.S. and is available off the shelf. In the U.S. the main player is the Phillips Air Force Laboratories at Albuquerque, NM. NATO - Tactical Implications of High Power Microwaves This is classified study. Keywords / Descriptors Antenna couplers ; Chips (electronics) ; Computer systems hardware ; Coupling circuits ; Damage assessment ; Directed energy weapons ; Electromagnetic radiation ; Electromagnetic susceptibility ; Electromagnetic susceptibility ; Electromagnetic weapons ; Evaluation ; Hardening (systems) ; HPM (High Power Microwaves) ; Integrated circuits ; Investigations ; Microprocessors ; Microwave equipment ; Microwave transmission ; Microwaves ; Sensitivity ; Threat evaluation ; Vulnerability ; Weapon systems ; Weapons effects Abstract Basic characteristics of HPM weapons are described, and key components are considered in some detail. Various system aspects and requirements for HPM weapons are discussed, especially as regards the required power level for inducing the intended effects. Operational aspects and possible future roles

of HPM weapons are given some consideration. Following the chapters related to HPM weapons, a more in- depth study of the actual effects of HPM on electronic components and equipment is presented. A rather extensive collection of experimental results from national programs is included. Significant differences have been found between the susceptibility of different types of computers, e.g., newer versus older. Protective measures have to some extent been studied by carrying out experiments on computers that have been modified, e.g., by mounting microwave absorbers at several places inside the computer. Specific measurements of the field at various locations inside computers illuminated by microwave fields are included. Likewise, some examples of the use of computer modeling are shown. Finally, the report contains results from experiments using prototypes of small- scale HPM devices. As a conclusion, current and generally available technology makes HPM a real threat to equipment and installations based on electronic circuits. (HPM) Microwave weapon Radar array - space Brain-computer interface 170 A brain-computer interface (BCI), sometimes called a direct neural interface or a brain-machine interface (BMI), is a direct communication pathway between the brain and an external device. BCIs are often aimed at assisting, augmenting or repairing human cognitive or sensory-motor functions. Research on BCIs began in the 1970s at the University of California Los Angeles (UCLA) under a grant from the National Science Foundation, followed by a contract from DARPA. The papers published after this research also mark the first appearance of the expression brain-computer interface in scientific literature. Naval Medical Research Center Walter Reed Army Medical Center U. S. Army Medical Research and Materiel Command MICROWAVE BIOEFFECT CONGRUENCE WITH SCHIZOPHRENIA John J. McMurtrey, a Copyright 2002, 8/25/03 In view of the documentation for microwave technology to induce internal voice in humans, the correlation between microwave bioeffects and schizophrenia is reviewed. These correlations are extensive and include cognitive deficit, electrophysiologic activity, startle decrease, neurotransmitter changes, hormone alterations, immune alterations, mitochondria deficits, deleterious histologic change in disease reduced brain areas, activation of hallucination involved brain areas, and ocular disease. Schizophrenia correlates with microwave bioeffects such that congruence indicates microwave involvement with this disorder. The development of methods to exclude microwave means in psychosis is imperative, and research is proposed. McMurtrey, M. S. a Copyright 2003, ABSTRACT Inner voice transmission development by ultrasound and microwave technique is reviewed as well as target tracking literature. References recognizing behavioral influence technologies are surveyed along with reported instances of the use of microwave and ultrasound energy forms on people. Many aspects of the considered literature directly contradict professional presumptions, particularly within the psychological and psychiatric communities.

INTRODUCTION People discerning remote manipulation corresponding to technology capable of such influence have formed protest organizations across the world. Educated society is uninformed regarding authentic documentation of the development and existence of these technologies, and is without appreciation of the hazard. Complaint of 'hearing voices' and perception of other remote manipulation must receive appropriate scientific and legal investigation with protection. Professional awareness is virtually absent with eminent texts and opinion being presumptive, without appraisal of the evidence. 173 Herein is substantiated: 1. The development of remote wireless ultrasound and microwave internal voice transmission. 2. Human tracking technologies. 3. References recognizing behavioral influence capabilities and the use of such technologies against humans. MICROWAVE HEARING There are early references to "radiofrequency hallucination" and of reaction to radio wave energy by Italian authors that may have observed radio frequency hearing phenomena, but the observations were poorly characterized, at least in available English publications. However sound perception was known through radar technicians in World War II and the late 1940's who had microwave hearing effect anecdotes. Though most literature on the hearing effect refers to microwave hearing, the phenomenon extends below microwave frequencies, and radio frequency hearing is also an appropriate term. Allan H. Frey was the first to substantially characterize the microwave hearing effect in a series of articles beginning in 1961. Subjects can hear appropriately pulsed microwaves at least up to thousands of feet from the transmitter. Transmitter parameters above those producing the effect result in a severe buffeting of the head, while parameters below the effect induce a pins and needles sensation. Peak power is the major determinant of loudness, though there is some dependence on pulse width. Pulse modulation appears to influence pitch and timbre. Microwave hearing is described as perceived within or near the head. The hearing effect can be produced from radio frequency components of magnetic resonance scanners. Direct microwave hearing experience by many microwave workers, and the phenomenon's well replicated animal definition makes this the most accepted of low power microwave effects. Review of human and animal microwave hearing confirmation by independent investigators establishes validity. Designs for scaring birds away from aircraft or other hazards by microwave hearing and induction of vertigo exist. While working for the Advanced Research Projects Agency at Walter Reed Army Institute of Research, Sharp and Grove discovered "receiverless" and "wireless" voice transmission.⁷³ Their method was simple: the negative deflections of voiceprints from recorded spoken numbers were caused to trigger microwave pulses. Upon illumination by such verbally modulated energy, the words were understood remotely. The discovery's applications are "obviously not limited to therapeutic medicine" according to James C. Lin in Microwave Auditory Effects and Applications. A Defense Intelligence Agency Communist literature review affirms microwave sound and indicates voice transmission. The report states: "Sounds and possibly even words which appear to be originating intracranially 174 (within the head) can be induced by signal modulation at very low average power densities." Among weapon implications are "great potential for development into a system for disorientating or disrupting the behavior patterns of military or diplomatic personnel." An Army Mobility Equipment Research and Development Command report affirms microwave speech transmission with applications of "camouflage, decoy, and deception operations." "One decoy and deception concept presently being considered is to remotely create noise in the heads of personnel by exposing them to low power,

pulsed microwaves . . . By proper choice of pulse characteristics, intelligible speech may be created" quotes the report. The Brunkan Patent # 4877027 "Hearing system" is a device for verbal microwave hearing. The invention converts speech with remote introduction into the head by parabolic antenna. The microwave spectrum granted by the patent is from 100 to 10,000 MHz (0.1-10 GHz) with pulse width from 10 nanoseconds to 1 microsecond, and bursts of such pulses lasting from 500 nanoseconds to 100 microseconds. Preferred operation is at 1000 MHz, which is the frequency of optimal tissue penetration.⁷⁸ Bursts of narrowly grouped, evenly spaced pulses determine sound intensity by their amount per unit time. A similar German patent for remote antenna microwave voice transmission is also based on microwave bursts. A microwave voice transmission patent with a non-remote transducer that is based on microwave bursts is "designed in such a way that the burst frequencies are at least virtually equal to the sound frequencies of the sounds picked up by the microphone." The maintenance of isolated hearing effects on people requires obstacle penetration and target tracking. Internal voice capable energy forms penetrate obstruction and can be localized. Sound transmission through enclosures is a common experience. Human tracking ability is not nearly as apparent for ultrasound as for microwave radar, but ultrasound is being developed to discern movement through walls. Though ultrasound is unnoticed even at high intensity and can pass through walls, a significant portion of the encoded sound from ultrasound speakers reflects audibly upon striking hard flat surfaces. Common technology utilizes the radio frequency hearing spectrum, which encompasses cell phone, TV, and radar frequencies. A variety of antennae localize the structurally penetrating radiation with collimation or focusing. The Luneburg lens emits parallel rays and has over 50 years utilization. Masers are another method of collimation. Military radar systems listing human tracking capability include: Advanced Radar Surveillance System (ARSS-1) by Telephonics; Beagle Portable Ground Surveillance Radar by Pro Patria; AN/PPS-5D Man-Portable Battlefield Surveillance Radar by Syracuse Research Corp.;¹² 4 Squire LPI Ground Surveillance Radar by MSSC Corp.; and Manportable Surveillance and Target Acquisition Radar (MSTAR) by Systems & Electronics, Inc.,¹²⁶ which have ranges from 7-12 km for personnel tracking. Some of these internet examinable references extend their capability from that listed in the 2000- 2001 Jane's Radar and Electronic Warfare Systems (NAVAL Space Command), ¹⁷⁵ which lists 13 target acquisition or tracking systems specifying such capability on personnel, purchased by militaries of some 27 countries. Besides Russian manufacture there are also East European producers of such systems. The most widely deployed system is the Rasit ground surveillance radar by Thomson CSF AIRSYS, which lists 20 km as 90% probability of detection for humans. Earlier systems have been in use since the Vietnam War. Basic operation of these systems involves a track initiation processor acquiring a target, while a data association filter maintains a tracking lock on the target. The above designs feature infantry portability or mobile forward deployment, and cannot be regarded as the limit of capability, since larger radars have a range of 100 miles, though lacking human tracking specification. A quarter of a century ago, Jane's Weapon Systems listed some 32 weapons fire control designs whereby aiming was entirely determined by radar tracking data with at least 10 systems primarily designed for control of one weapon system.¹³ 2 Eight weapons guidance systems utilized microwave target illumination by a dedicated surface beam (called semi-active homing). Sensors for more recent active guidance systems also illuminate targets for both laser¹³³ microwave radar units that are compact enough to be onboard the missile, and so inexpensive as to be disposable with the weapon. In a scene right out of a George Orwell novel, a team of scientists working in the fields of "neural engineering" and "Biomimetic MicroElectronic Systems" have successfully created a chip that controls the brain and can be used as a storage device for long-term memories. In studies the scientists have been able to record, download and transfer memories into other hosts with the same chip implanted. The advancement in technology brings the world one step closer to a global police state and the reality of absolute mind control. More terrifying is the potential for implementation of what was only a science fiction fantasy - the "Thought Police" - where the government reads people's memories and thoughts and then rehabilitate them through torture before they ever even commit a crime based on a statistical computer analysis showing people with certain types of thoughts are likely to commit a certain type of crime in the future. We already pre-emptively invade nations and torture alleged terrorist suspects with absolutely no due process of law, so the idea of pre-emptively torturing a terrorist suspect before hand to prevent them from committing an act of terrorism in the future really isn't that far fetched of an idea. Perhaps a less sensational example, than those I just depicted out of own of Orwell's famous dystopian novels would be using the technology as it is depicted the modern day Matrix movies, in which computer programs are uploaded into people's brains allowing them to instantly learn how to perform a wide variety of tasks. 187 FROM RADIO TELESCOPES TO ELECTROMAGNETIC WEAPONS 11.05.2007 RIA Novosti Moscow/Yuri Zaitsev RT16 - Radio Telescope Latvia Microwave digital transmitters A group of Russian scientists from Tomsk, Yekaterinburg, Nizhny Novgorod and Moscow have developed a series of unique compact generators capable of producing high-energy pulses of hundreds and even thousands of megawatts. This compares with the capacity of major Soviet hydropower station on the Dnieper or an energy unit at a modern nuclear power plant. The new generators are sources of electromagnetic radiation rather than electricity. Their main feature is a capacity to produce enormous power in a matter of nanoseconds. The impulses can be generated with a very high frequency. VICE President of the Russian Academy of Sciences (RAS) Gennady Mesyats recalled that the first high-current electron accelerators were developed in the U.S.S.R. in the 1960s. In 1970s, Soviet scientists learnt to generate powerful microwave nanosecond pulses. The current generators have no counterparts in the world. In effect, Russian scientists have made a breakthrough in what is called relativist high-precision electronics. The pulse is primarily of interest for fundamental research. Reporting these results to the RAS PRESIDIUM at the beginning of this year, scientists emphasized that sources with super radiation effects can be broadly used in long-range high-resolution impulse based radiolocation and in studies of non-thermal impact of powerful electromagnetic fields on radio electronic components and different biological species. 188 Super-powerful pulse generators can test the reliability of radio electronic devices and the

immunity of energy facilities to different impacts. They can imitate the interference caused by a lightning and even by a nuclear blast. Their tiny size and unique physical properties make their sphere of application extremely wide. The electromagnetic pulse (EMP) is a product of a nuclear explosion. It puts out of action even those electronic control systems that have withstood the shockwave and reduces expensive smart weapons to scrap metal. There are different ways of generating electromagnetic pulses - for example, it can be produced by explosion- induced pressure on a magnetic field. Physicist Andrei Sakharov was the first to propose using this principle in a bomb in the 1950s. Today, records in the size of an induced magnetic field, maximum current and properties of such »radiators« belong to Russian scientists. They surpass foreign counterparts by 10 times. Depending on what facilities the EMP is directed at, the damage radius can be from several hundred meters to kilometers. Without creating a shock wave and inflicting visible damage, it destroys all enemy electronic equipment,. Moreover, unlike electronic countermeasures, electromagnetic weapons are capable of damaging radio electronic components event if they are switched off. At present, the infrastructure and troops of many countries are stufed with electronic equipment. It will be the min target for electromagnetic weapons. The destructive effect is produced by the high accelaration of the magnetic and electrical components of the EMP. They induce voltage cnages ranging from 100 volts to 10.000 volts in circuit networks and terminals of radio electronic equipment. The ensuing massive sparking of cable jackets, their contact to frame and the ground, and breakdowns in connectors put the equipment olut of action and lead to fires and explosions. To understand this effect better, it is enough to imagine what will happen to your TV-set if there is a power surge - it will simply melt. The Americans were the first to use such weapons in combat, for instance in Yugoslavia. Some analysts believe that Electromagnetic bombs would have given the U.S. a vital advantage in the early stages of the war in Iraq. They could have disabled not only Baghdad control and communications systems, but also electronic components of missiles, even those located in deep bunkers. But the U.S. Command chose not to use Electromagnetic bombs for fear that they might disrupt its own radio electronic equipment in the area. Today, many countries have electromagnetis weapons. Military experts predict a victory in future wars to those who will be ahead in ELECTROMAGNETIC RADIATON. In many cases, not only the military-industrial complexes but also different civilian organizations, research Intstitutes and Univerities conduct studies in this field, threby increasing the threat of radio electronic terrorism. For example, a broadband high-energy and compact wave source is sold without any restrictions. In several frations of a second, it can burn dow all eletronic equipment at an eletric power station, substation or control tower. A short intensive pulse can intstatly paralyze data bases, financial centers and industrial equipment. 189 SECRET SERVICE: ELECTRONIC MIND CONTROL, ELECTRONIC WEAPONS USED ON PEOPLE SURROUNDING THE TARGET WITHOUT THEM KNOWING THIS Electronic Mind Control is about forcing thoughts into your brain. Electronic weapons can make you cough, fart, burp, scratch your head, make you urinate, make you very sick, give you instant headache, cause heart problems, your death, etc. Both are used today by your national secret services on innocent people. If you are a target of gang stalking and/or electronic harrasment/torture then please read this article. Also pass it to your partner, family, friends, because probably they will get attacked in one way or the other as well. Last months I have been thinking a lot about electronic mind control. Wrote something on my site about this some time ago, my limited experience with voices in the head, induced dreams and children reacting too often within a minute to my (sub-vocal) thoughts, and the feeling of a thought planted in my brain. More recent (after about a year) I once again had this experience, the thought was returning until I responded to it and after that. The first time it was about a person, now it was a song, the idea is you start to sing it yourself. I believe this was not my normal thought pattern. Also on a few occasions I experienced an unnatural urge to do certain things. I notice these things because for 4-5 years now I think about what I am thinking and why I am thinking and why I am acting the way I act. The best I can say is that there have been thoughts that did not fit my usual thinking pattern: i.e. they are returning too often in a short time. But like I mentioned earlier, I can recall only 2-3 such occasions over a period of 2-3 years. Maybe I am attacked more often and I do not know? In this case I would

just be responding to what comes into my mind, so there is no repeating pattern. I believe this is not possible, because I am very aware of what can be done, and always try to randomize/mix up my actions. The last months I noticed more attempts to control me, to make me think of certain things, including a forced dream. Also at one time I got up and walked to the kitchen but when I got there I realized there was no reason to go there. I believe I was controlled to go there because a car was arriving for a neighbor house and I had to get out-of-the-way (they sometimes also do this by the urinate beam or defecate beam making me leave for the toilet). These attempts to control me are usually a few days in a row followed by periods of weeks without any try. My guess is they want me not to be cautious, alert, and then try again. All this has nothing to do with hearing voices. These are thoughts forced into your brain. So at the moment I believe it is possible to make people do certain things with electronic mind control but with many limitations. Can the attackers make a family member think of you? Yes, they can. Can they make a friend call you at a moment they want? In general I do not believe this is possible, but some people may be more receptive and may just react. But a repeated pattern (repeated for the target) for a certain person is not possible. In that case they are just co-operating with the attackers. Can they make a friend think you are a strange person? 190 Yes, I believe they can but also for a limited time. After some time your friend will start thinking about his/her thoughts and discard them as being weird. So my summary at the moment is that people can be electronically mind controlled but only for a limited time with the same (kind of) thought. Can they mind control a group of people this way, e.g. a residential area? I do not think so because the returning pattern would alert a lot of people. Of course they can control a group of people at the moment simply by microwaving an area with e.g. a vomit beam (google: vomit beam) and everybody will feel sick. Electronic weapons used on people surrounding a target When you are targeted by gang stalking and/or electronic harassment/torture be aware that your attackers will do everything, I repeat everything, to eliminate you. They will use the whole world if necessary, including children, because they do not care, they are psychopaths, murderers, pedophiles. When you are a target you must be prepared for everything. You may think that now you know about these methods and technology you are prepared for the worst. But you are not! Your attackers will use these methods and technology also on people surrounding you, WITHOUT them knowing this. For example when you are with your friend in the same room, they may zap your friend with a scratch beam everytime you turn a page of the magazine you are reading. Or they may zap your friend with a cough beam every time you open a webpage on your computer. Or make you burp or fart and then do the same thing to people close to you. What they also love to do is to put a beam on your head giving you a lot of pain and when you go outside everywhere people are scratching their heads. A number of the people surrounding you is just co-operating with these bastards but there are also others who are involved but not knowing this. There are many reports, including my own, about being beamed from the sky by military aircraft. Note that these beams are not stopped by roofs, walls, or metal so you can be attacked in your in your car as well. When you are driving in your car they may attack people in the car in front of you or behind you with the scratch beam. But again these people may also be co- operating with the attackers. Electronic mind control used on people surrounding a target Mind control is just another area of harassment, torture. When you are a target you must be very aware that they will try to manipulate you in all kinds of ways. There is no easy answer to this but creating extra awareness about what and why you think and do things certainly helps. You may randomly delay your reactions to your thoughts or not react at all, do other things.. Like the attackers attack people surrounding a target with their electronic weapons to make their body react, they may also attack them with electronic mind control devices, to make them react to what you are doing. For example when you start to type an email to friend X, your child playing in the same room may say after a minute something like 'daddy, is X coming this afternoon?'. Or when you have mailed an old friend this morning you haven't seen or spoken in a year, your partner asks you in the afternoon if you have mailed with this friend recently. These are examples from my life. I am still researching this subject more, but I wanted to warn all people, not just targets, of these facts. The perfect tools to destroy relationships, friendships, ... 191 Electronic weapons and electronic mind control are not only used on

a target. They are also the perfect tools to destroy relationships, friendships, business relations, etc. of the target. By attacking the target, other people may observe strange behaviour. For example, when a neighbor leaves his house/walks by the target may start scratching his head, or is beamed with the urge-to-urinate beam. The net effect being that neighbors see a person always scratching his head when they leave their house/walk by, or see a person always leave the room (for the toilet) when they leave their house. (Another thing they may do is make the phone ring when a neighbor leaves his house/walks, to make the target move through the house visible for the neighbor.) By attacking a partner or friend and making them react WITHOUT knowing that they are being used, the target may think they are part of plot against him/her. If the target does not know about this, this will certainly end friendships. If the target knows this can be done then the problem for the target is of course to analyze these situations correctly as the possibility exists that a person reacting is part of the plot against him (although the person himself/herself probably does not know the extend of the harassment). How far will the attackers go? You finally may think you now know it all but this is not true! The attackers are psychopaths, murderers, and as such do not care about anything, do not care about other people including children. They may use totally random people who have never heard of the target without them knowing it to get their job done. Example: the attackers know the target will be talking to a friend or other person. They also know this other person has daily contact with someone at work, person X. The attackers now attack both the target AND this random person X with the same electronic weapons attack, e.g. cook/burn the eyes, causing severe eye pain, or cook/burn stomach, causing severe stomach pain, or cause other very serious trauma. The target knows what is being done and is tortured. Person X is not knowing/understanding what is being done and is in fact tortured WITHOUT he/she knowing this, and probably will visit a physician, or be late at work. Now when the target talks to his friend or other person, he most probably will be told about what happened to person X, a horrible experience for the target. So here we have a chain of crimes, random people used and attacked WITHOUT them knowing it and the target not only physically tortured but mentally tortured as well. Will the attackers cause serious damage to the health of person X to get their job done? Yes, they will. Although their intention is not to cause the death of a person X, or cause permanent damage, this may happen as a result of their actions. Just like they use children to appear to cross by bicycle when their target leaves by car his driveway, or when they cook a target almost to death, or involve their target in constructed car accidents, or constantly try to drive the target into suicide by continuous suffering. So deaths or permanent damage may happen because they do not care, because they are psychopaths. Some people refer to these kind of setups as secret services games but there is no game here. This is about innocent people being abused, attacked and murdered! It cannot be stated enough: There are no laws allowing these kinds of harassments/torture. The above are illegal actions, horrible violations of human rights, child abuse, etc. These crimes are committed only because it is almost impossible to prove (Why do you think the human laser technology of the United States is called Active Denial System?) 192 In a few decades the US government (not the US people!) has become the most criminal organization in the world, responsible for the torture and deaths of hundreds of thousands innocent people in the world every year, and they are exporting their illegal and human rights violating crimes to all their (NATO) allies. They let other governments sign documents that forbid them to take Americans to international courts. Why do you think they would do that? People of the world, American people wake up! Personal introduction to mind reading, mind control, mind rape As most of the articles in my blog, this one also is based on my personal experience and observations. Shortly after the attacks on me started in 2000 I told a friend that they wanted to enter my head, my mind. I did not know about mind control, mind reading, gang stalking (organized stalking), electronic harassment at that time. But that is how it felt then, and I think it was a good summary of what was being done. I managed to keep the bastards out, but it took me about three years to adjust my way of thinking. I did this by learning of the evil cowards that make up our national secret services, of their beyond imagination crimes. I could not believe things like this were done and police looking the other way. I also learned about beyond imagination mental and physical pain inflicted on me, about fear. But now I know who they are and what they are. Only

after accepting these facts I was able to develop what I call a new part of me. This new part allows me to switch on-the-fly between normal life and the life a person should not have to live. So, you can say I am not mind controlled or mind altered but that I developed a new extra piece of mind optimized to deal with the psychopaths of our secret services. You may want to read about gang stalking (organized stalking) and electronic harassment first. Next read about mind reading and mind control below so you will know when you, a family member, a friend, etc. is being attacked/hit. Note that I do NOT suggest that people around a secret services target all are mind controlled. They may as well (for whatever reason) be cooperating with these sick and disturbed creatures. Gang stalking and electronic harassment are mind rape Gang stalking (organized stalking) and electronic harassment/electronic torture are illegal methods and techniques often used by our secret services to eliminate their targets. These methods and techniques are used to drive the target into such a state of insanity that he/she commits suicide, collapses as a psychiatric patient, commits a crime or collapses/dies of continuous suffering, in other words, the world must believe something was wrong with him/her. Gang stalking and electronic harassment are tools that are used to murder a person mentally or physically. Not in a moment of rage but systematically, like turning pages in a book, we are talking about premeditated murder here. The mind of the target is forced into such a state that he/she will do everything to get rid of this mental and/or physical torture. Gang stalking and electronic harassment are used to rape the mind of a target over and over again until the target collapses mentally or physically.. 193 Note that a target may be murdered by other traditional methods as well like constructed car accidents, poisoning, drugging, induced diseases, directed energy weapons (heart), etc. See also: Secret service: fear for the truth to be revealed!(17) - Gang stalkers and people cookers are murderers, the crimes they commit belong to the worst crimes in history. 1.State-of-technology By experience I know high tech equipment exists to monitor human body muscle movement, brain. I do not know if you have to be chipped to be a proper transmitter but personally believe this is not necessary. Let me give you an idea of the sensitivity of this through-wall monitoring equipment by the following examples: 2.Detection of body movement When you are a target of gang stalking (organized stalking) the attackers try to drive you insane by reacting to everything you do most of the time being your body movements. Raise your arm and a door at a neighbor house is slammed, every time you turn on the other side in bed a dog somewhere outside barks, etc. 3.Detection of minimal breathing changes If you hold your breath in bed a little bit longer than normal, a sound is made somewhere in your house. This is pretty amazing but it is only a fraction of what can be done. 4.Detection of closed eyes eye movement Now you lay completely quiet in your bed, you relax and breath normally, your eyes are closed. With your eyes closed and relaxed turn your eyeballs without moving any other body part, without changing breathing, etc. At the same time you turn your eyeballs a sound is made, e.g. a bang on the wall, someone coughing outside. This is not a coincidence, every time you try this, a reaction follows. Of course this reacting can be classified as horrible torture, violation of all human rights, and the ones applying this kind of torture are the sick and disturbed of the planet, garbage of society. But it is equally important to recognize the existence of such equipment and what can be done with it. The human body (including its brain) is an electromagnetic transmitter and high tech equipment is available to pick up its signals. Technology has been developed and refined the last decades. Advances in computer technology make it possible to decode these signals from the human body when reading or controlling the body and mind. Also, because most of this technology uses high frequency bands, the walls of your house or office are no barrier for these signals and distances can be hundreds of meters. Compare a mobile phone used inside your house, you can receive calls and dial the number of a friend. Mind reading I have never experienced other mind reading than mind reading based on subvocal speech. Subvocal speech is based on the fact that most (jaw) muscle movement is identical to speaking when speaking silently to oneself. When we think we often talk to ourselves without speaking the words. High tech equipment receives these muscle movements and translates into words. This really must be a not too difficult technique to apply. Mind reading may be done covert, i.e. without the target knowing about it. 194 Some years ago a Russian military officer said that they had done mind reading on President Boris

Yeltsin and had prevented him to speak about a certain subject. If they want to torture the target they let the target know that they are reading his mind. After the attacks started in 2000 and I was being watched 24/7, my thoughts were the only thing private. Then I got feedback about what I was thinking, a truly horrible experience, all privacy gone. After recovering from this discovery I did a lot of testing, what could they read, could they see what I saw, etc. It is not everything you think of they can read. It is in fact possible to send different information, wrong information to your mind readers. Mind reading used to torture and murder is just another example of the horrible crimes committed by your national secret services. Mind control Because of the attacks on me I now have a lot of personal experience with mind control. Emails referring to things in your life, people walking by talking words relating to your life, people staring at you everywhere you go, phone calls when you want to leave, traffic jams to make you miss appointments, preventing you to sleep, pigeons flying over you screaming when you leave your house (even crashing into your windows or car), poisoning, coughing on tv to react, in fact an endless list of criminal activities. I am not influenced very easy by these kind of things but must add that probably every person can break if applied with methods that make you very tired, exhausted. There have been three types of mind control based on electronic weapons I believe I have been subjected to: 1.Hearing voices They force voices or sounds into your head. When the attack on me started in 2000 and I was on the beach, voices of people I could see but could not have heard because of the distance, came to me crystal clear. An amazing experience. Much later, something alike was done when I was in the swimming pool, with my ears under water I could hear sounds as if above water. These effects may be easy to accomplish using infrasound (there is an mp3 player for swimmers. They just vibrate your bones, your skull). 2.Induced dreams They make you dream about certain things you normally do not dream about. Not too long ago I woke up with an exceptional memory of a dream I had. I had induced dreams some years ago and maybe their common characteristic is the level of detail you can remember from these dreams. You do not have to dig to get the full story, it is there already. Induced dreams are very common for gang stalking and electronic harassment victims. 3.Forcing a thought into your brain There were occasions where a thought kept returning many times a day for a period of 1-2 weeks. But it was easy to force it away. When this happened I had to think about reports of mind control victims and thought that perhaps they were forcing some thoughts or patterns into me too. Having read about mind control, it made me think that it may have been induced by electronic devices aimed at my head. Though not 100%, I am 95% certain that it was induced like the induced dreams. So here we have other methods used by our secret services to (illegally) control human beings. If you do not know about this technology and its capabilities than you will be confused, may be following the thought that was planted into your brain. Or you may start to believe that you are not normal thinking so much about a subject, may be a man, a woman, an event in your life. You may be forced thoughts into your brain and never knowing the difference from normal thinking. 195 This way people can be controlled e.g. in their attitude against other people, e.g. a secret services target. It is also possible this way to covertly set up someone to hate the royal family, to hate their government, some well-known person. I leave it to your imagination what you can do more when applied with other more conventional mind control methods like secret services agents saying certain things, creating events to influence. This certainly is a way to create enemies (and then call them terrorists) and I believe it is being done this way . Children may be very easily controlled by beaming voices into their heads, especially small children as they have no reference to what is normal. This can be done to have the child react to an event in the life of gang stalking (organized stalking)/electronic harassment target. For example, a secret services target is thinking of person X and his sub-vocal speech is read, and then within 30 seconds the child says something about person X. If this is a pattern then the child can be assumed mind controlled and used to drive the secret services target out-of-his-mind. Another example might be to set up a child against one of the separated partners, etc. Mind rape Mind reading and mind control sometimes is referred to as mind rape. The reason is that in general mind reading is not used to observe but instead to control a person in illegal ways or to inflict maximum damage (including death) to a person. From Operation Mind Control (exerpts from) by Walter H. Bowart: Mind control is the most terrible

imaginable crime because it is committed not against the body, but against the mind and the soul. Dr. Joost A. M. Meerloo expresses the attitude of the majority of psychologists in calling it 'mind rape,' and warns that it poses a great 'danger of destruction of the spirit' which can be 'compared to the threat of total physical destruction . . . ' ... [p. 23] To stop mind rape we have to stop our national secret services. The human mind has no firewall like a computer meaning that we human beings are extremely vulnerable to mind reading and mind control. The computer revolution empowered enormous progress in decoding brain and body transmissions, as well as in generating transmissions that can influence brain and body. Technology and equipment have been annexated by (Western) governments and are further developed and used by military and national secret services. We are at a point in history where the scale, reach, capabilities of these devices has become such that measures must be taken to prevent misuse because that is exactly what is happening right now. Although attacking the mind of a person is a very serious crime under current law, it is good to implement new laws specifically addressing the attack of the mind. Also methods and equipment must be developed that can be used to detect and disturb e.g. cheap detecting devices that can be used by police and citizens also to be used in a court of law, and devices to jam or scramble our own important brain frequencies (preventing scanning of the brain), etc. Secret services are NOT good, in fact nothing is good about them. 196 They have become depots of psychopaths, murderers, child abusers. It is against the law to perform mind reading, mind control, mind rape, on a person, it is a violation of human rights. Still they do it because the culture has become that everything can be done what cannot be proven (and if someone tries to prove it, he or she is simply eliminated). This is not normal, it is a crime, it is sick. We cannot rely on secret services changing by themselves, why should they. They don't want investigations, they don't want to go to jail. We have to disassemble them ourselves, break them apart. Jail them for the people they have murdered, for the lives of children they have destroyed. Military and intelligence agencies have developed frightful electronic weapons in black budget projects the last decades. These weapons, based on radio waves, are used to disable, to present pain and torture, to drive into suicide, schizophrenic or criminal behaviour. This is done by cooking/irradiating body parts, letting a victim hear voices, reading the mind, etc. through walls and from distance. Read and prepare yourself for the people cookers, you may be next! Try to recall the most sick and disturbed persons you have ever read or heard about. Now try to imagine there are persons far worst than the ones you know, torturing innocent people slowly to death, torturing and murdering children, even torturing and murdering animals. That is really difficult to accept for us, normal people as we are. We simply do not want to believe this kind of evil exists, it makes us sick, we may start vomiting when stories so horrible are being suggested, being told. But it can be even worst. Imagine this evil is related to your government, is being approved, executed, controlled, outsourced by your national secret services including military. It is all hard to believe isn't it. Unfortunately for your peace of mind these disturbed persons really exist, and unfortunately your national secret services are really involved in these horrible activities. But even more unfortunate are the victims of these horrible crimes. The new generation of electronic weapons is capable of burning and cooking humans, destroying (exploding) body tissue, or cause heart attacks. This is all possible from large distances (hundreds of meters) and through walls. These weapons are now (2008) being used at large by secret services to eliminate people: incapacitate, drive into suicide, insanity, criminal behaviour, or are just used to cause heart failure, brain damage, etc. They replace knife, bullet, poison, car accidents. Push button torture & murder - cooking people. Secret services have turned into depots of psychopaths and murderers. And it is getting worse. They now recruit people to press the buttons of these electronic weapons, button[1] is cook-a-person, button[2] is simulate-a- heart-attack, button[3] is simulate/cause-kidney-failure. Can you image a person microwaving someone like a microwave oven cooks meat? Electronic weapons, capabilities April 2008 Low-power microwave weapons can be hidden e.g. in a shopping bag and are used to distract e.g. by giving you burning sensation, stings, make you burp or fart within seconds, blur your vision. High power microwave (HPM) weapons can be installed everywhere and mounted in cars (including your own) and can be used to cook a person like a microwave oven cooks meat, to 'shoot' and burn. 197 Most of these weapons can be aimed very

precise, that is why they are called Directed Energy Weapons (DEW). From a distance (and through walls) they can hit you, but not the person sitting next to you. Sometimes these weapons are called non-lethal because they are designed to be applied only for a very short period with the intention to incapacitate people or make people get out of the beam, not to kill them immediately. All experts agree that zapping persons for extended periods is very damaging, which is easy to understand, compare reports about cell phone irradiation. The perfect weapon, does not kill (immediately), leaves no evidence. If you want people out of the way without evidence you cannot use a gun. There will be proof of a bullet and damaged tissue. With current electronic weapons eliminating people is very easy and best of all, elimination is without evidence. When you want to prevent a person from giving a presentation at work, you can heat him up the night before so he will feel sick, give some diarrhea, make him cough when talking, make him scratch his head, etc. If this was done to you, would you be able to understand this? Probably you would think you just had the worst luck that day. **BUT THIS WAS NOT BAD LUCK: YOU WERE INCAPACITATED WITH ELECTRONIC WEAPONS.** In other words, you were cooked that day. They also may do this to the target's children, meaning the target must stay home or go home to take care of his child. Low power/low intensity is just as damaging to your functioning as a human being. Electronic weapons will not immediately kill you or burn a hole in your body. When you are in a meeting someone in the same room can zap your head with a low intensity device, so you want to scratch your head. Someone may fire an energy burst at your throat so you start coughing when you are doing your presentation. They may mount a microwave weapon in your home aimed at your legs when you are in bed and after a month you have to see a doctor because your feet really hurt. They attack your credibility or have you out of the way during important events. These are all very damaging low power/low intensity applications. You may lose your job, a promotion, your family, etc. High power/high intensity is horrible torture. If the target understands what is being done to him they will increase frequency and intensities. The target gets cooked by HPM (high power microwave), for example every five minutes he receives a burst making him burp, giving a burning sensation on the back, feeling cooked inside where beam went through, and in case of high intensity there is also a burning sensation where the beam leaves the body. Or they make the target's body react to what is happening in his surroundings. E.g. everytime a car passes by, the target is zapped so that he will burp or fart at the same time (it takes 1-3 seconds to make a person burp or fart). Or they burn his intestines (tailbone) so he will suffer horrible cramps, burn his back with insane intensity when he is in the swimming pool, shoot HPM at him when he is running. **198 THIS HORRIBLE TORTURE IS CALLED PEOPLE COOKING!** Everybody can be a target. In some cases you are just a one time target, and once they get what they want they will go away. In other cases, you are on a list and must be eliminated, not because you are a bad person but mostly because you just was at the wrong place at the wrong time. If 1-out-of-20 people in your country are connected somehow to the national secret services network (probably much more) then chances are you have co-workers, friends, acquaintances who are part of this network. Of course they will not tell you this. Part of the population is eliminated to let the sick system survive i.e. recruit new agents (murderers), see also the links below. Maybe you have something they want, e.g. your house is at a strategic position (corner), maybe you criticize the policy of your government, maybe you are a loner, maybe you are an activist, maybe you play piano on Sunday mornings, maybe you know something of some person. You may argue that the chance you become a target is very small. That is right. But don't think you cannot become a target if you live a normal life, in fact most persons placed on this list are friendly, non-shooting back persons. You may become a target more easily than get involved in a car accident. Physical and mental death. If you have been selected to be eliminated, see above, neighbours, co-workers, friends, etc. are recruited and become part of the sick system. The aim is your physical or mental death: suicide, psychiatric patient, criminal, disease caused by irradiation or poisoning. Although gang stalking techniques are used for this and are very effective for maybe 90% of the cases, the process is significantly speeded by applying electronic weapons. These weapons are used to make a target look like a schizophrenic. If the target does not know about these weapons he may think he has been hit by the fury of God himself. If the target does know, then it is very difficult to

convince other people what is done to him. These weapons have been developed but they did not tell us and did not develop methods to detect these kinds of harassment. Governments/secret services keep electronic weapons out of the media, police is not instructed on what to do with complaints like these. Covert electronic harassment/torture - examples It is called covert as the target being burned/cooked has no clue of what is happening. Examples: - Heated body, feeling sick like having the flu - Headaches that come and suddenly disappear - Sting sensations like a fly or mosquito - Blurred vision - Irresistible coughing - Very serious diarrhea - Heart attack/cramps 199 - Kidney pain - Excessive burping - Excessive farting - Stomach pain - Stomach bubbling - Intestinal cramps - Pain in the legs - Pain in ankles - Heel muscle - Reduced strength in hands - Aging the body If you do not know what can be done to you, you will get a wrong diagnose because nothing is wrong with you (in the first place)! You may even get operated. Covert electronic harassment/torture - How it is applied Most of this harassment is done the same ways people are gang stalked. If you tell someone about these incidents, they will say: I got the same problem sometimes. - When you bend over they hit your back - When you stand on one foot e.g. in the kitchen to get something from a cupboard they hit that foot - When you turn your head, they hit your neck - When you sleep they cook your legs so they will feel stiff the next morning - When you sleep they wake you by cooking your stomach - When you rub your eyes they blur your vision Also important is that they 'help' the target by making things worst. Example: suppose your left leg becomes painful because you hit a piece of wood by accident. Now, they will zap your leg at the location you feel pain over and over again, including nights, to make you suffer (maximum pain). Non-covert electronic harassment/torture - examples It is called non-covert as the target being burned/cooked knows exactly what is happening. - All mentioned above - Make your body react (burp/fart) to cars driving by your house - Burn your anus - Microwave you with insane intensity (you feel like being cooked alive) - Shoot you with HPM when on the street - burn/cook your body - Leave visible evidence of their attacks - Burn your child e.g. in the stomach, then burn you in the stomach - Burn/cook your children reacting to what you say/do - Shoot your child in the eye when you dry the face after a shower (to make it appear you hurt them) Also important is that they 'get exited' when the target makes mistakes. Example: suppose you release a software update but something is not correct. Now they will beam you on the head, the back, your child, etc. to drive you out of your mind, insane. Sometimes they wait for a long time just to get a good 'shot'. 200 The people cookers belong to sickest species on the planet As already stated above, the only thing people applying electronic torture have in common with normal people is that they look human. They are murderers and as such there no boundaries for them anymore. It cannot be emphasized enough, the persons applying electronic harassment/torture belong to the sickest species on the planet. I know, other horrible torture also exists, like cutting organs from a living persons. You cannot compare horrible torture, but day-by-day torture by people cooking, including children, certainly is very horrible (the end result being physical or mental death). The people cookers are part of the psychopaths and murderers that make up your national secret services. We, the normal people, created laws and human rights. The ones who violate these must be jailed. Let's jail these bastards! Weapons based on radio waves, compare microwave ovens, are used by secret services to drive persons insane. Even if you know what is being done, you cannot protect yourself against these horrible attacks. There are no ways for common people to prove these attacks and many of them are labeled schizophrenic. Even a secret service has its limits. They cannot eliminate every target by murdering him or her with a bullet, knife or overdose. But hey, mental murder is often better giving a group of people that can be experimented upon with new medicine, drugs, etc. To drive a target insane extremely advanced technology is used. One is the monitoring equipment. They look through walls and can see everything you do in detail. They also use very advanced computer manipulation technology to change the behaviour of your PC, e.g. it picks up new mail from your ISP only at certain moments. Another method is mind control. By playing a movie on a device close to you, e.g. the other side of the wall, you will think you have dreamt about this. And finally there is mind reading. They will put a scanner on your head and record / compare your Behaviour. These advanced technologies are not only used to follow a target or record behaviour of the target. In addition they are used to react to target in one

way or another. The target is second by second remembered by e.g. a sound at the neighbours, outside, mail arriving at certain moments, cars honking at certain moments etc. that he is never alone. People not knowing about this advanced technology (most people do not know) will be driven insane. Advanced technology is used to let you hear strange things, your dreams are controled, apparatus makes strange sounds when you look at it, when you go outside to buy something specific it is sold out everytime, when you go outside people look at you and smile where you go, the car driving before you is exactly going where you go, etc. A decade ago many of these intrusions were possible as well but with all this new advanced, compact, technology, it is becoming very easy to drive persons into psychiatric behaviour. Mind control is a controversial subject most importantly because more desinformation has been released about mind control than with any other subject. Mind control is very real however and was performed by our national secret services yesterday and is performed by our national secret services today! 201 From 50 years... Top level mad scientists from Nazi Germany were actually brought to the United States through "Operation Paperclip", and have been continuing their work to this day in places like Brookhaven labs, Cold Spring Harbor and Plum Island. and Today....in 2000 202 203 204 205 206 The World's Smallest RFID IC Radio Frequency Identification Integrated Circuit U-chip Electronic Numbering of Products and Documents using the "μ-chip" (or mu-chip) supported by a Networked Database unleashes new Business and Life Style Applications that facilitate innovative Manufacturing, Distribution, Consumption, Tracking and Recycling operations. Concept The RFID, wireless semiconductor integrated circuit that stores an ID number in its memory, was proposed about a decade ago as an alternative to the barcode. Its use, however, has so far been limited to a few applications where its advantages offset its relatively high cost. *Size compared to a grain of rice*! The World's Smallest RFID IC The μ-chip is Hitachi's response to resolving some of the issues associated with conventional RFID technology. The μ-chip uses the frequency of 2.45GHz. It has a 128-bit ROM for storing the ID with no write-read and no anti-collision capabilities. Its unique ID numbers can be used to individually identify trillions of trillions of objects with no duplication. Moreover with a size of 0.4mm square, the μ-chip is small enough to be attached to a variety of minute objects including embedding in paper. Manufacturing, distribution and tracking systems can be built or enhanced using the μ-chip with an event-driven accumulation of, and on-demand access to, information stored in a database through the network. By coupling this database with the versatility of the μ-chip new business and life styles applications can now be brought to reality. New applications allow manufacturing, commerce and recycling processes to be operated in a way that has not been possible before. *Size compared to a human fingertip 207
